CONTACTS

Software Engineer with 5 years of experience building production systems with Python (FastAPI, Django, Flask) and TypeScript (Node.js, NestJS). Strong background in backend development, REST API design, databases (PostgreSQL, MongoDB, Redis), automated testing, and reliable deployments. Master's degree in Engineering with a strong interest in complex engineering systems, scalable architectures, and challenging technical problems. Quick to learn new technologies and adapt to new domains, with a practical, engineering-focused approach to building reliable and maintainable software.

PROFESSIONAL SKILLS

- **Languages:** Python, TypeScript/JavaScript
- **Backend:** FastAPI, Django/DRF, Flask, Node.js, NestJS; REST APIs, Webhooks
- **Databases:** PostgreSQL, MongoDB, MySQL; Redis
- **Architecture:** Microservices, Multi-tenant SaaS, Event-driven messaging (RabbitMQ), Async workers
- **AI/LLM:** LangChain, LangGraph, LangSmith, OpenAI API (prompt management, evaluation frameworks, monitoring, iterative improvement)
- **Testing:** PyTest, Jest, Unit/Integration/E2E testing
- **Tools:** Git, Docker, Postman, Auth0, Jira
- **Additional:** Linux, C, C++, AWS, CI/CD

Soft Skills:

- Clear written and verbal communication with engineers and stakeholders
- Strong ownership mindset and accountability for production outcomes
- Analytical problem-solving and structured debugging under pressure
- Fast ramp-up in new domains and technologies

Languages:

- English
- Russian

EXPERIENCE

Marguru LTD

Software Engineer (Full Stack)

Israel, Tel Aviv

Jul 2024 - Present

- Architected and developed a multi-tenant AI Assistants Platform using Python, FastAPI, MongoDB, and RabbitMQ, enabling businesses to build and operate custom conversational AI bots for Telegram and WhatsApp.
- Designed and implemented modular microservices and multi-step workflow logic, including async message processing, webhook handling, conversation orchestration, fallback scenarios, and outbound messaging through separate workers.
- Developed and maintained backend platform components with a focus on reliability, observability, debugging, and production stability across distributed services.
- Implemented LLM-powered agents with LangChain and OpenAI GPT-4 and RAG-based architectures, including agentic workflows and dynamic prompt management via LangSmith Hub for controlled updates without redeployment.
- Built secure integration infrastructure, including bot token encryption with Fernet cryptography and Auth0-based API authentication.
- Built an admin dashboard using React and TypeScript, with a FastAPI backend providing aggregation pipelines for real-time analytics, evaluation visibility, user management, and operational data visualization.
- Developed and maintained automated test coverage for core backend workflows, including integration and E2E tests for webhook processing, async message flows, API behavior, and critical user scenarios.

NILOS

Software Engineer

Israel, Tel Aviv

Jun 2023 - Jul 2024

- Developed and maintained backend services in NestJS and TypeScript, delivering 20+ production features and improvements across core business APIs.
- Built a comprehensive unit testing suite (Jest), increasing coverage by 40% and reducing production incidents by 55% through regression prevention in critical modules.
- Created an end-to-end testing framework for public APIs from scratch, reducing bug detection and resolution time by 72% and improving release confidence.
- Collaborated on database performance tuning (indexes, query optimization, payload trimming), improving key endpoint response times by 25% on average.
- Worked in an Agile environment, participating in sprint planning, code reviews, and incident postmortems to continuously improve system reliability.

- Designed and developed an internal ERP and logistics management system using Flask and PostgreSQL, serving 100+ internal users across operations and supply workflows.
- Implemented comprehensive automated testing with Pytest, reducing critical production errors by 50% and improving release stability for core modules.
- Built and documented 60+ RESTful API endpoints and integrations with internal services, reducing manual processing time by 30% for day-to-day logistics operations.

EDUCATION	
Moscow Aviation Institute (National Research University) Bachelor of Engineering	2012–2016
Moscow Aviation Institute (National Research University) Master of Engineering	2017–2019
Developers Institute (Israel) Full-Stack Developer, Bootcamp	2023
